## SUMMARY

---

Highly skilled Full Stack Developer with 3 years of experience in C#, ASP.Net MVC, API development, and database optimization. Delivered scalable tools and dashboards for CSR, workforce management, asset tracking, and sales analysis, enhancing productivity and user experience.

## PROFESSIONAL EXPERIENCE

---

### PROGRAM ANALYST

**Foundever (Formerly Known as Sitel), Mumbai India**

*March 2022 - Present*

Collaborated on multiple projects as a full-stack developer, delivering end-to-end development and support. Designed and implemented APIs, performed manual testing, and ensured proper maintenance of the applications.

#### 1. Corporate Social Responsibility (CSR) Website

Designed and developed authentication and authorization modules. Implemented an image uploader feature to improve usability. Optimized stored procedures to enhance tool productivity and efficiently manage network traffic between clients and servers.

#### 2. WeLead Website (Foundever's Women Empowerment Tool)

Developed a folder-based structure to store and retrieve photos and videos showcasing Foundever's achievements in women empowerment. Implemented user authentication to ensure secure access.

#### 3. MCQ-Based Questionnaire Application

Created a CRUD application for employers to upload MCQ-based questionnaires from Excel files into a MySQL database. Enables employees to submit answers and instantly receive results. Built functionality for employers to view employees' responses and results.

#### 4. Exit Intervention Tool

Developed a tool to monitor employee resignations and terminations. Gather critical workforce data to aid in balancing company resources and workforce management. Created dynamic pie and bar charts reflecting real-time sales and location data. Build a form that triggers automated email notifications to relevant clients upon submission.

#### 5. WeTrack Tool

Designed and implemented a comprehensive asset tracking system to monitor and manage the company's resources, including equipment, documents, and other assets. Developed features to log and track the movement, assignment, and usage history of assets, improving accountability and transparency. Streamlined the process of asset recovery and reassignment to optimize resource utilization. Integrated search functionality to allow quick retrieval of asset information based on categories, locations, or tags.

**Tech Stack-** C#, Asp.net, MVC, Web Forms , Core, Javascript, Git ,Jira,Python, JWT , REST ,AJAX, Java, Swagger API , MySQL, MS SQL , Java, Software Development Life Cycle (SDLC), Data Structures & Algorithms.

## PROJECTS

---

### 1. Zoom Meeting Application

I developed key features for a Zoom Meeting Application, including user registration and login modules, end-to-end API design, and video calling functionality. I also created a fully responsive website with Zoom CRUD operations, focusing on building a practical and user-friendly platform. **Tech stack- Java 8+, JSP and servlet, JDBC, MYSQL database, Tomcat Server.**

### 2. Fitness Application

I worked on a Fitness Application, designing a user interface that effectively showcases the gym's facilities and environment. I developed application forms that allow users to book trainers based on their preferred time slots. The application integrates with a database to store and retrieve data, providing real-time updates on available booking slots for a seamless user experience. **Tech stack- Java, JSP, MYSQL database, Tomcat Server.**

## DEGREE & CERTIFICATES

---

- B.Sc in Information Technology from LN College of Commerce and Science with 8.4 CGPA.
- Full Stack Java programming from Itvedant Software & IT Institute.
